Combined strapping tool for steel strap

Joint forces

Each strapping process consists of two steps. Tensioning and joining.

The HPE-L combines muscle power and pneumatics for both processes. The strap tension of up to 7,000 N is generated pneumatically while joining is done manually.

The HPE-L offers the same advantages as the HKE but expands them by greater user-friendliness and a uniform and high tensioning force thanks to pneumatic drive.

This saves valuable energy when working with flat packages
