

TITAN 
Wir halten zusammen

Celebrating difference. Exploring our own paths. This is our philosophy, the driving force behind all we do. These ideas inspire us to question standards and raise the bar for our customers. So that cargo world-wide is secure in transit.

Difference does not necessarily mean we want to be bigger than the competition. Just better. TITAN is a full-range system components supplier from the simple strap all the way to comprehensive strapping facilities. The quality of the whole is under our complete control, the defining difference.

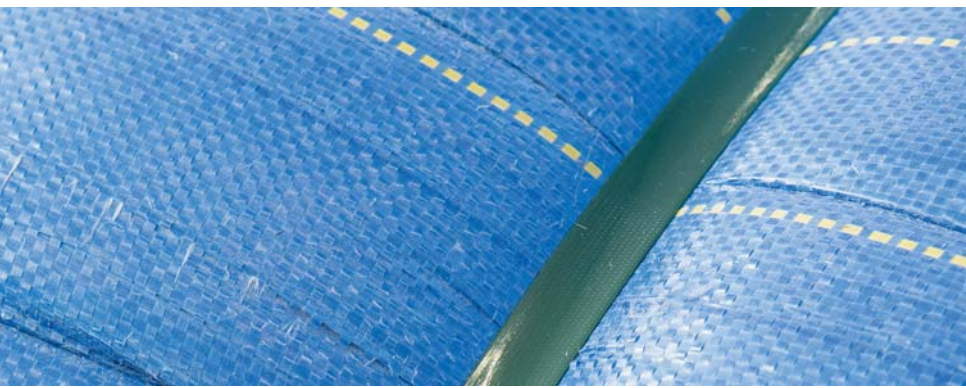

Exploring our own paths. TITAN is independent, so we can chose our own way. We invest in in-house research and production, ensuring that innovation is an important part and parcel of all we do.

TITAN is a top provider of packaging technology. The most secure steel strap welded joint in the world based on our unique TITANARG® technology, the first hoseless pneumatic hand-held machine, sealless joints, and the VK 10 strapping head are just a few of our leading innovations.

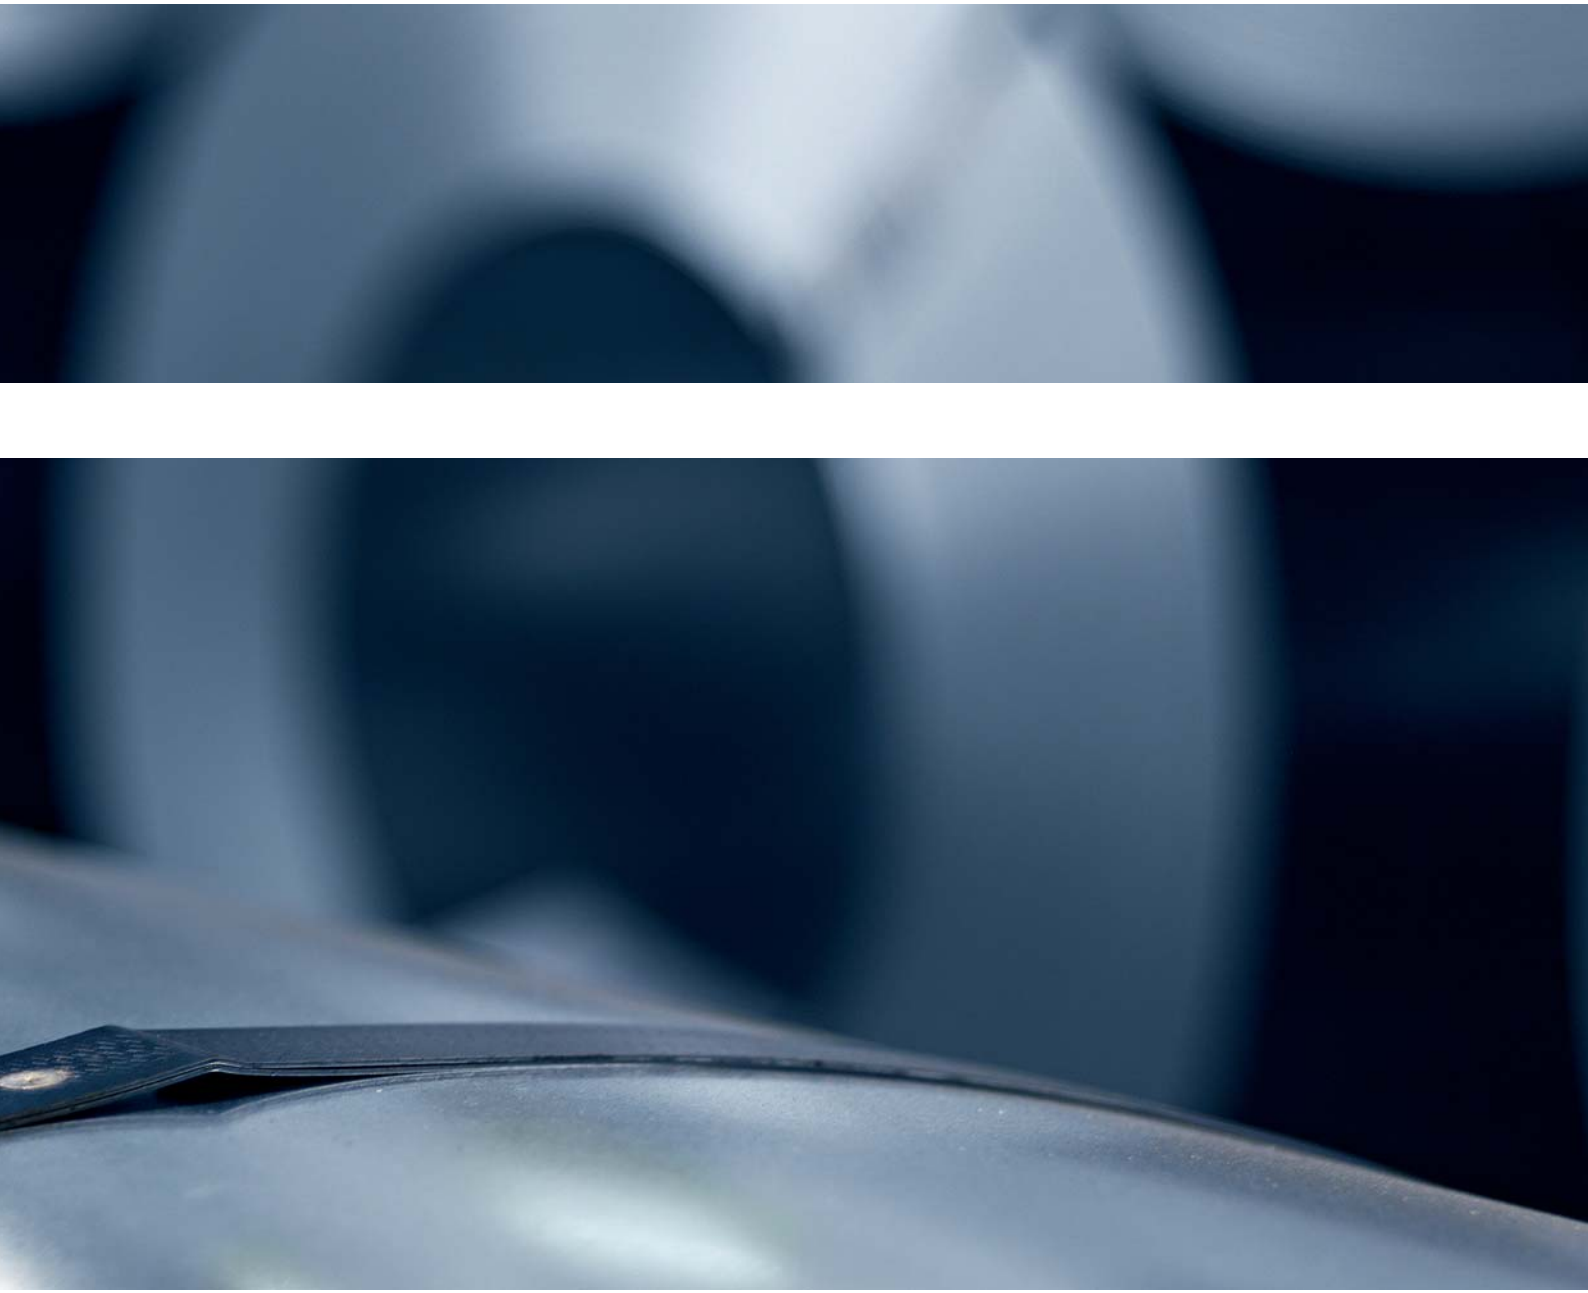

Feathers to steel coils

Strapping solutions
for all branches

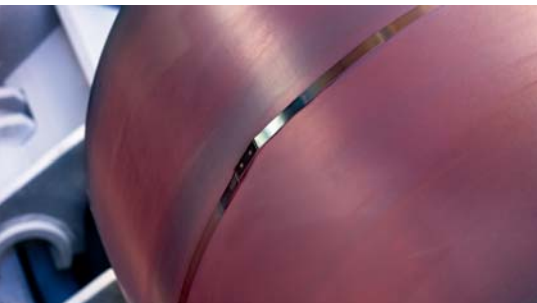

Our strapping technology holds together a wide variety of cargo. A sand-lime brick must not break during transport. Delicate bananas have to be protected from bruising. Strapping a fibre bale requires different technology than that for securing a 40-ton steel coil.

Regardless of the type of cargo being shipped – and whether for further processing, for retail or to the consumer – with TITAN strapping technology, it will arrive safe and sound. Right down to fragile goose feathers.

Steel, stone, wood, fibres, food stuffs:
Protecting goods of all kinds is our daily
work. No question goes unasked or
unanswered, no challenge is too great.
On the contrary.

We tackle the task of strapping a palette of
cans over two metres high with enthusiasm.
Professionally bundling steel pipes or
securing bulky packets of laminate is an
adventure. Our approach and actions are
determined by each customer's individual
needs.

Strapping technology is often the final stop in an established production and packaging line. And off-the-rack technology will not do: individual solutions are called for. Ideally all components should be supplied by one company. Configured to work together for optimal function.

To ensure the best possible outcome, TITAN always starts at the very beginning: We explore all aspects, reflect and project for maximum quality.

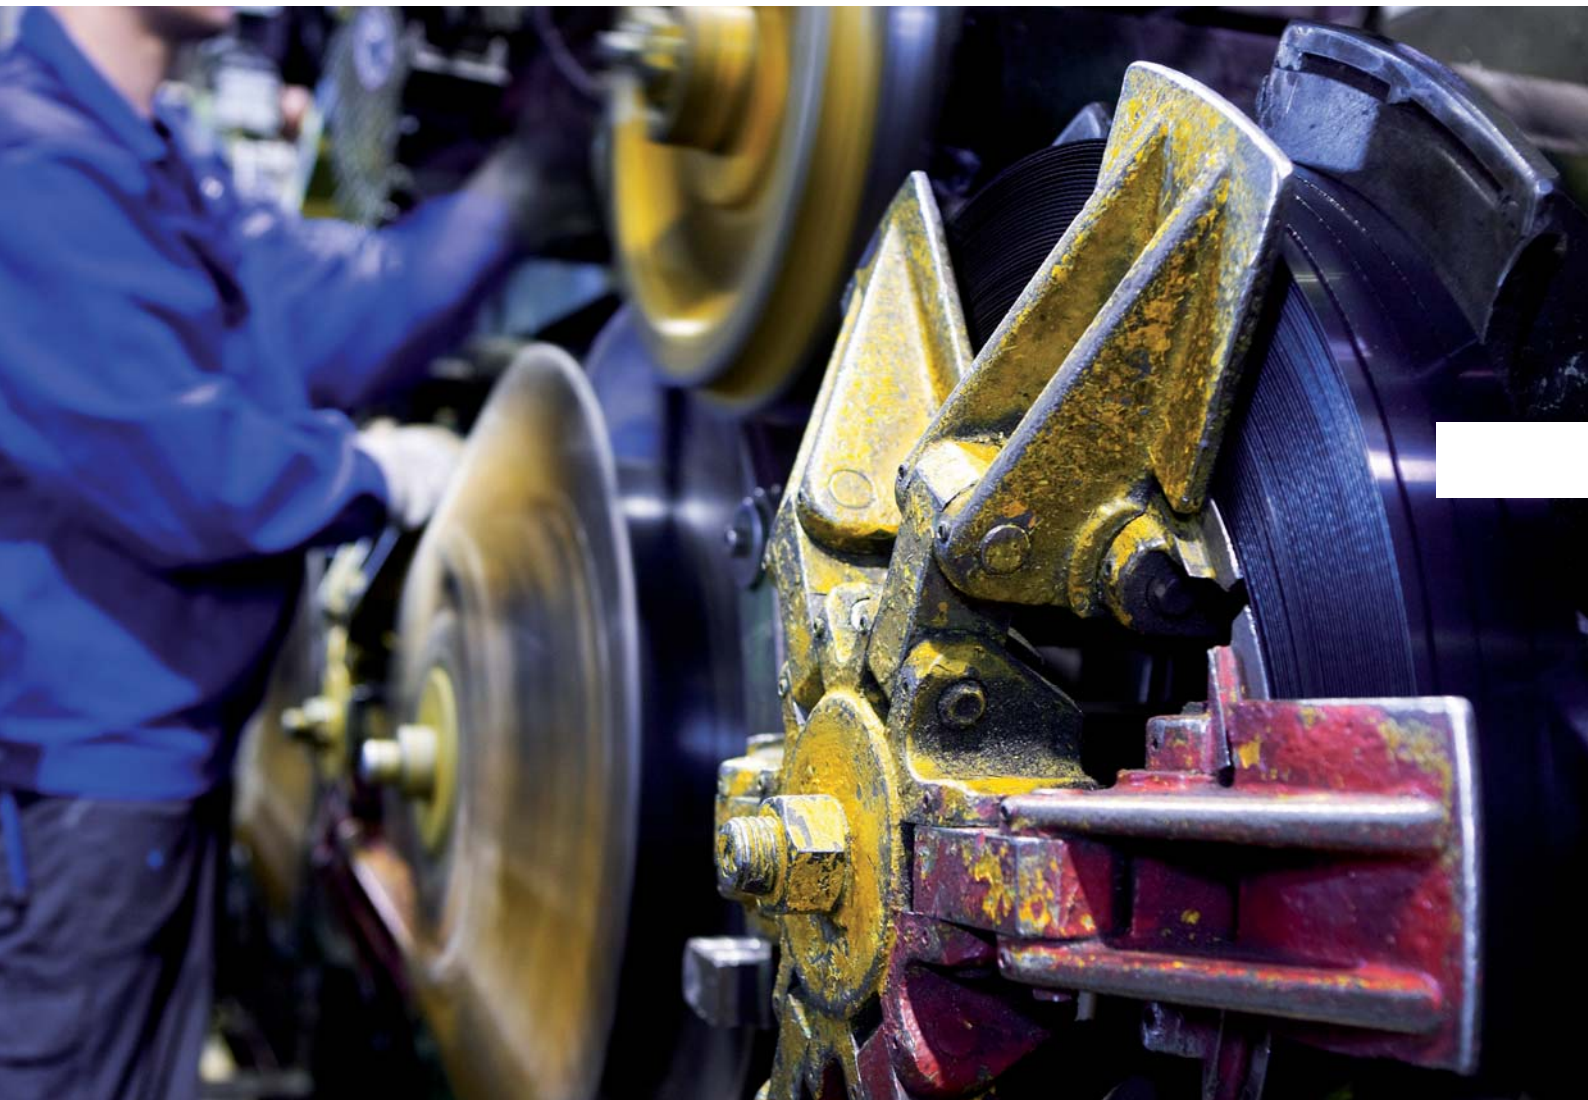

Secure transport begins in the minds of our developers and only ends when our customers' products have been optimally strapped, securely packaged, and are on their way.

We offer the full range of systems from hand tools, strapping heads and individual strapping machines all the way to complex automated solutions. All are designed and produced in-house. Our products perform with technical excellence and conform to our exacting standards for the best possible efficiency.

The complete strap range

Steel and plastic strapping
of our own manufacture

Good strapping does more than “just” hold things together. It must be particularly stable or highly flexible depending on the application. It has to hold securely but leave no traces on the product, provide a tight fit but with flexible give under pressure.

TITAN offers high quality strapping of our own manufacture. In steel and plastic. In standard and custom sizes. Materials research and optimised production methods ensure that we do much more than just comply with norms. We continue to set new standards in strapping quality.

Our ultra-modern PET strapping production facility employs an extrusion process to produce high quality strapping from one-hundred percent polyester recycled materials. The family-run company uses a state-of-the art production facility to produce all our steel strapping in-house too.

Our straps provide stable optimal physical and geometrical properties. And TITAN is a leader in sealing systems as well: Our unique TITANARG® welding technology has made us the sole provider of the most secure steel strapping in the world. TITAN's unique thermo-seal principle ensures that our plastic strapping is also the most secure.

Built-in innovation

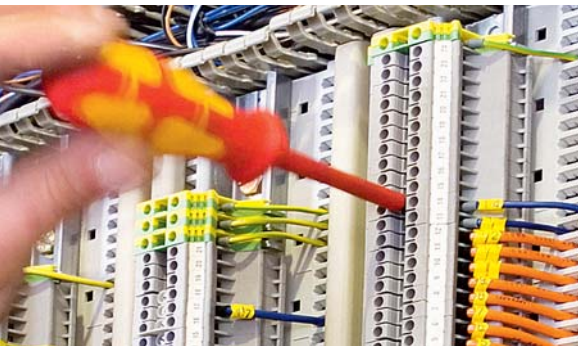

In-house equipment and
machine production at TITAN

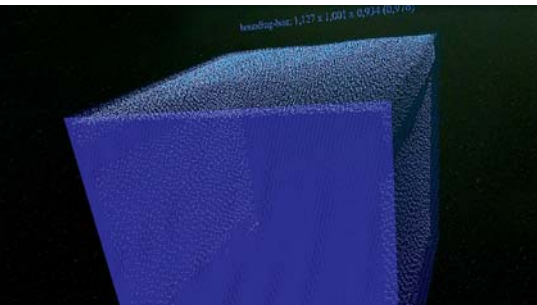

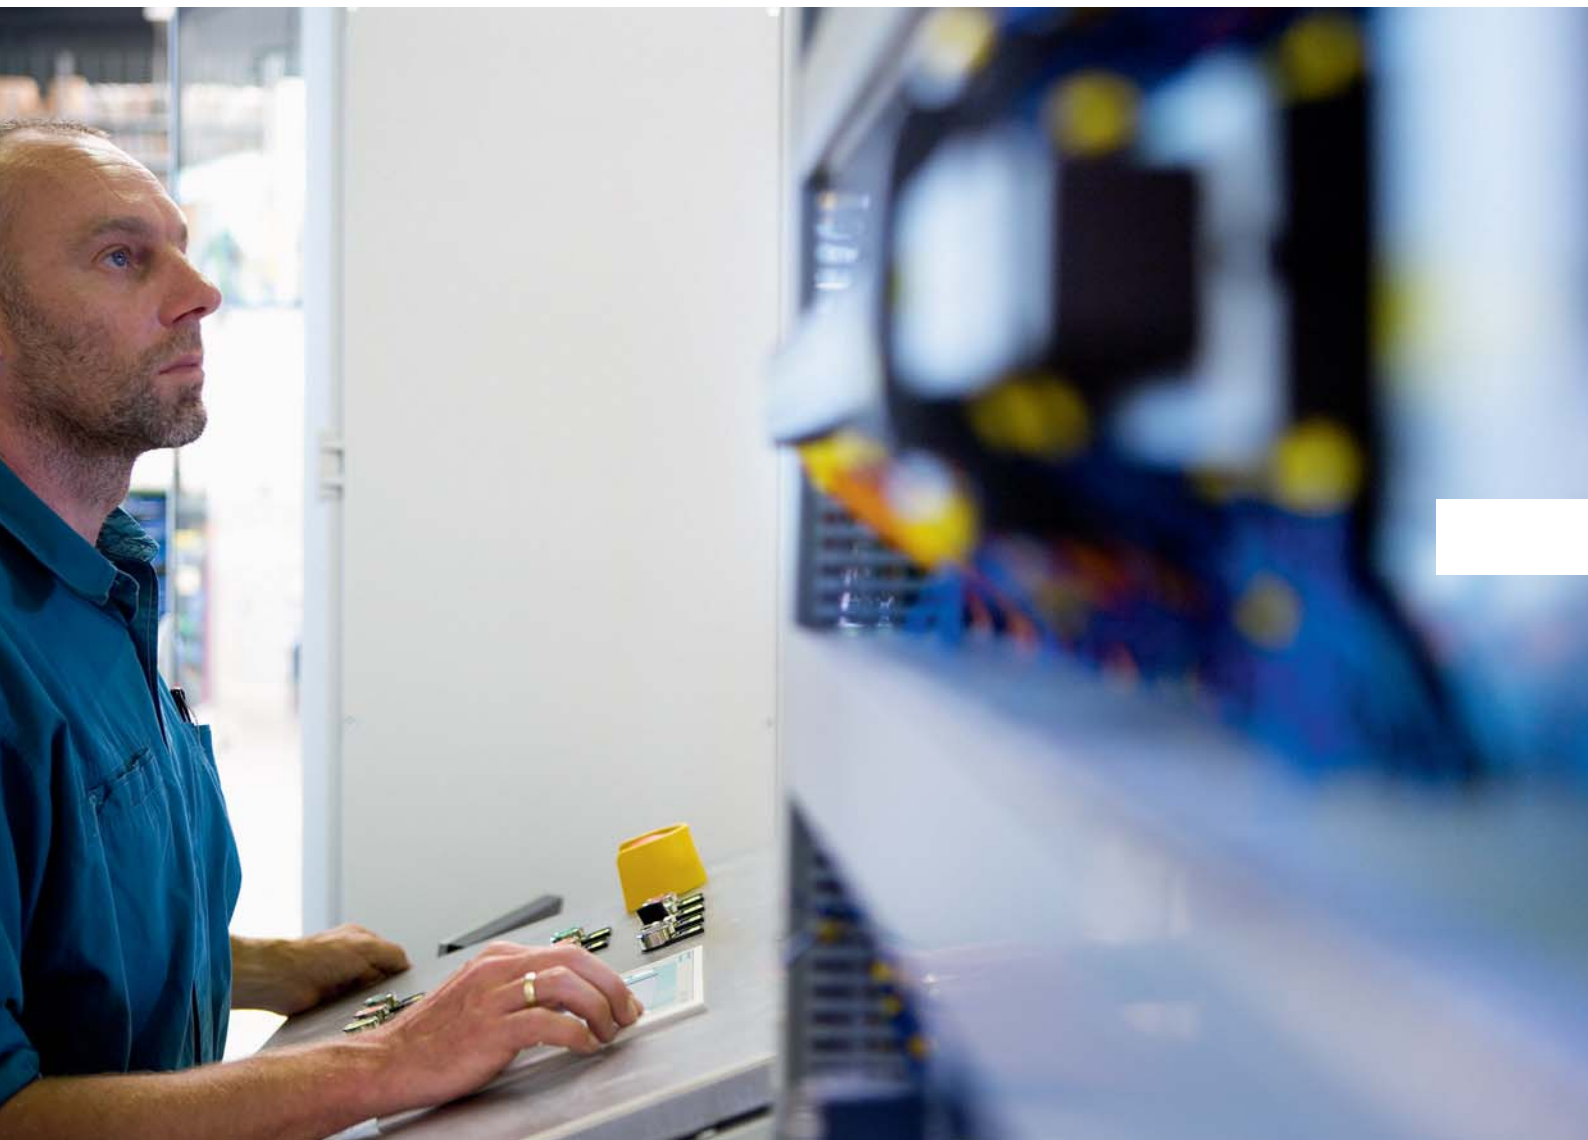

TITAN is known for realising complete strapping solutions from the planning stages to actual implementation. Our own production complex at the company headquarters in Schwelm enables us to be independent in the areas of development, tool manufacture, production of equipment and heads, assembly, spares manufacture and custom machine engineering.

We invest heavily in research and production, ensuring that innovation is always an integral part of all we do. TITAN reliably develops technological highlights and offers unique technical features, such as intelligent high performance machines that recognise product dimensions automatically or double-head strapping machines capable of processing both PET and steel strapping.

Last but not least: TITAN balances technical high performance with efficiency. We recognise the current challenges our customers face and understand the importance of cost pressure.

Suggestions on how to cut costs, save time and optimise production processes are integral elements of every project. We provide our customers with technology that more than pays for itself over the long term.

Transport securing: At TITAN, this involves much more than just machines and materials. We offer exceptional development competence and engineering skills.

Our specialists know their jobs inside and out. Their goal: top performance each and every day. This is how system concepts for complex industrial automated solutions are created – from the roller table to quality control, from electronic controllers to the scanner.

Measure, strap, weigh and label goods. Control, visualise and save the information in a data base. Our experts combine all the different processing steps into a complete optimised system.

The food and chemicals industries and warehousing and transport technology require custom-tailored solutions. TITAN engineers fulfil the most rigorous demands for speed, cleanliness and safety with the highest quality in system technology.

World-wide network

From Germany
to international markets

Designed and made in Germany. Used throughout the world. TITAN products are at home the world over. But they never forget where they came from: A family-run private company that makes decisions independently and acts with flexibility.

TITAN stands for efficient processes, quick decisions and personal contact in every phase of our cooperation with customers. Our network spans the globe from Europe to Australia. TITAN employees are available to customers everywhere at any time.

At TITAN, people work for people. Our employees will explore unique paths and their dedication goes well beyond the "9 to 5" in their strive to fulfil customer wishes. Our service is also incomparable: fast, competent and always with a personal touch. Enthusiasm, team spirit and the will to question the norm are important components of our success.

Visitors to TITAN find it both rich in tradition and innovative. Pragmatic and passionate. Rooted locally and open to the world. And always obliging. This is the TITAN difference.
